PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience in database modernization, backend migration, and full-stack application development. Proven track record in reverse-engineering legacy database architectures, designing scalable schemas, and building highly customizable, consumer-facing applications powered by complex third-party integrations. Skilled at applying a developer mindset to build reliable, high-performance systems and transform enterprise data into actionable business intelligence.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, SQL (MSSQL, Oracle SQL), Java, Flask, HTML/CSS, JavaScript, Next.js
- **Database & Architecture:** Database Design & Migration, Legacy Schema Reverse-Engineering, Data Modeling, MySQL, Supabase
- **Software Engineering:** Object-Oriented Programming (OOP), System Architecture, Software Design Patterns, Data Structures & Algorithms
- **Tools & Analytics:** VSCode, JasperReports, Oracle SQL Developer, Git, Apple Wallet API, Google Wallet API, Vercel

WORK EXPERIENCE

Information Technology Intern

Jul 2025 – Oct 2025

AHAM Asset Management Berhad

- Contributed to core system modernization and database migration from legacy software to upgraded enterprise infrastructure.
- Reverse-engineered legacy Microsoft SQL Server (MSSQL) database structures, unraveling complex data relationships and writing intricate join queries.
- Mapped, transformed, and migrated backend legacy schemas neatly to new Oracle SQL tables to ensure data integrity across systems.
- Designed and generated comprehensive data reports using JasperReports, providing actionable analytics and business intelligence for cross-functional teams.

Kitchen Helper & Server

Apr 2022 – Jul 2022

Grand Hyatt Hotel

- Managed high-volume daily task execution under tight operational deadlines, honing strong time-management, discipline, and high-pressure problem-solving skills.

PROJECTS

Bartr Web App | Full-Stack Software Design Project

Apr 2025 – Jun 2025

Python, Flask, MySQL, HTML/CSS

- Led a 4-member team to design and build a full-stack item trading application featuring user authentication, negotiation systems, and item listing CRUD workflows.
- Engineered the backend architecture in Flask and MySQL, integrating secure user session handling and optimized query execution.
- Implemented core software design patterns (Singleton, Strategy) to ensure code maintainability, scalability, and clean system boundaries.

Kwazam Chess | Object-Oriented Design Project

Nov 2024 – Feb 2025

Java

- Co-developed a two-player custom chess game focused on strict Object-Oriented Programming principles.
- Formulated modular class hierarchies to control board state management, complex piece movement logic, and game execution rules.

Digital Loyalty System | Full-Stack Development Project

Aug 2026 – Present

Next.js, Supabase, Apple Wallet API, Google Wallet API

- Architected a white-label digital loyalty platform integrating Apple and Google Wallet APIs to issue dynamic, merchant-specific reward passes.
- Engineered a scalable database structure to isolate merchant program configurations from individual loyalty cards, ensuring real-time pass updates upon stamp balance changes.
- Implemented modern Next.js architectural patterns utilizing server actions for seamless backend operations and dynamic template rendering for wallet hero images.

EDUCATION

Bachelor of Computer Science (Hons.) Major in Software Engineering

Aug 2026

Multimedia University (MMU)

ADDITIONAL INFORMATION

-
- **Languages:** English (Fluent), Bahasa Melayu (Native)
